

ABSTRACT OF THE DISCLOSURE

A content of a comment of a speaker participating in a conference is broadcasted, via a communication satellite, to a participant having a satellite communication terminal including a receiving unit for receiving a signal from the communication satellite. A conference center which is connected to a satellite earth station for satellite communication with the communication satellite includes a back-way communicating unit for accepting a voice request signal of the participant in the conference and a comment signal of the participant to whom a voice is granted, and ground communicates data via a ground communication network for the participant having a satellite communication terminal without a transmitting unit to the communication satellite.
